Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12, which take from the time of the Moons coming to the South, the remainer is the hour of the night But if the Shadow be paſt 12, add thoſe hours to the coming to the South, and the Sum is the hour of the night.

Example. Upon the 25th of *March*, the Moon being 13 day old, and comes to the South at 24 h. 24 m and that night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take 2 h. 30 m. from 10 h 24 m. and there will remain 7 h. 54 m. for the hour of the night —— But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m. would make 12 h. 54. m. for the hour of the night.
